

April 23, 2018, 10.13

- Added, upon request of Brain van Hout, 26 codes for Country specific Military or Government aircraft; see sections 3.3 and 7.2.

Note that these codes can (only) be used for parking positions in Airport files in order to get the right (country specific) aircraft.

April 22, 2018, 10.12

- VMRGenerator now (also) reports the number of Soundai problems:

Soundai problems:	33
--------------------------	-----------

The file **SoundaiProblems.txt** lists the problems it has found with your soundai configuration. It may report:

- a) aircraft that have no soundai folder (with either a soundai package or an alias to another aircraft).
- b) aircraft that have a soundai folder but with an alias that does not exist or an alias pointing to another alias.
- c) Aircraft.cfg files that miss the line soundai= in the [General] section.

April 17, 2018, 10.11

- Airline Data is now always generated (fully). The edit box has been removed from the Main window.
- Updated the internal ICAO airline codes database, some obsolete ones are removed, some missing ones were added. In total the number has increased with about one hundred.
- Information about wildcards in Registration codes added.

April 4, 2018, 10.10

- Fixed a bug in the 'skipped for' messages, about liveries skipped on priority. The for part was sometimes empty.

Mar 28, 2018, 10.9

- Re-installed support for the IVAO MTL, see Manual section 3.8.2.

With this support **IVAO members** may be able to use their liveries locally in PSXseeconTraffic too.

Mar 21, 2018, 10.8

- Bug fixed: invalid airline code counter was not cleared between runs in one session.
- Improved logging of liveries skipped on priority.
- Improved logging of liveries skipped on registration code.
- Added an output file with liveries that have no registration code (no valid atc_id= line).

- Added the possibility to get an overview by Airline, Aircraft Type, Folder and Registration code(-s), see updated Manual section 3.1.

Mar 19, 2018, 10.7

- Added airline GMT (Magni Charters Mexico)
- Fixed this unsigned int arithmetic bug: (-1 - 115 + 98 = -18) 😊

Mar 17, 2018, 10.6

- Fixed, a sometimes occurring, faulty non-consecutive [fltsim.x] section warning.
- Improved the readability of the log.

Mar 15, 2018, 10.5

- The check on title, introduced in version 10.3, had a bug that prevented a second or more run of VMRGenerator in the same session. Now fixed.

Mar 13, 2018, 10.4

- Bug fixed in detecting and removing spaces around airlinecodes (in the atc_parking_codes= line) and around registration codes (in the atc_id= line).

Mar 12, 2018, 10.3

- VMRGenerator now also checks the livery **title** for unique-ness. If not it will generate an invalid [fltsim.x] warning and skip the livery.
- It no longer adds Cargo type B77L while aircraft of that type already may be present in the normal liveries.

Mar 8, 2018, 10.2

- Added ICAO codes FBD FlyBondi and SEW Skyward Express

Mar 1, 2018, 10.1

- Added a check on double registration codes, this used to be part of PSXseeconTraffic at start-up.
- Improved Boeing 747 and Boeing 748 cargo livery detection.
- Updated the User Interface.
- Renewed the Manual.

Jan 23, 2018, 10.0

- Removed support for vPilot. vPilot2 is finally capable to detect your liveries and generate rules for it.

Jan 23, 2018, 9.9

- Removed support for IVAO_MTL while these liveries are not compatible with P3Dv4.1. There are much better alternatives such as FSPXAI, FAIB, MT6 and UTL.

Jan 9, 2018, 9.8

- Added airlines BXR, DER and JMA

[removed ...]

May 29, 2014 Version 1.0

First Release
