

**Feb 10, 2020, version 6.1**

- Added middle aircraft type: E295
- Added ICAO airline code: ATW, KME, NSW, RUK, SJX, TZP

**Jan 23, 2020, version 6.0**

- Service update
- Added missing ICAO airline codes.

**Sep 26, 2019, version 5.2**

- A new file **info\AirlineType.txt** is generated. It contains a list of the airlines and their types found in your liveries.  
This file is used by PPG 12.0.

**Sep 12, 2019, version 5.1**

- Double registration codes in the line `atc_id=` will be removed.  
(e.g. in `atc_id=PH-AKS,PH-AKR,PH-AKS` one `PH-AKS` will be removed)

**Aug 23, 2019, major new (mandatory) version 5.0**

- In each line for a detected livery in `AI_liveries.xml` a boolean parameter **cargo** was added. The information is taken from the **atc\_parking\_types** key. If it contains `CARGO` this parameter will be true. *Note that this does not work for IVAO\_MTL.*
- With the addition described in the first bullet it is no longer needed that AILGenerator adds extra lines with a specific ICAO cargo aircraft type (MD1F ...). That part has been removed.
- Added A337 to the aircraft types.
