

October 7, 2021, first major release, version 1.0

Removed the possibility to define Output folders; they are now set fixed to the PSXseeconTrafficTools subfolders **liveries** and **airports**.

Rationale: This flexibility was not really needed and it may lead to auto connection problems by PSXseeconTraffic if users change the folder names. In order to make operations smooth I decided to remove this possibility.

October 3, 2021, first release, version 0.9

Important: PSXTrafficTools works with PSXSeeconTraffic 27.0+ only, so install v27.0 too.

This program combines and replaces two existing tools:

- AILGenerator, now (better) named **LiveryInfoGenerator** (LIG), and
- ParkPosGenerator, now (better) named **AirportFilesGenerator** (AFG).

These new tools have also got an AUTOMATIC mode, the same as the search functions built in PSXseeconTraffic.

At the first run, PSXseeconTrafficTools will copy the paths you have set for AILGenerator and ParkPosGenerator (if used).

PSXseeconTraffic v27.0 will auto connect to the output folders of LIG and AFG, instead of AILGenerator and ParkPosGenerator.

If everything works as expected you may uninstall AILGenerator and ParkPosGenerator from your PC.

To remove them completely, also delete the installation folders and delete the AILGenerator and ParkPosGenerator folders with the parameters.xml files from C:\Users\<>you>\AppData\Roaming.
